IMPORTANT:

- Installer: In the interest of safety and to minimize problems, read these installation instructions completely and carefully before you begin the installation process. Leave these installation instructions with the customer.
- Customer: Keep these installation instructions for future reference and the local electrical inspector's use.

Important Safety Instructions

About Safety Instructions

The **Important Safety Instructions** and warnings in these instructions are not meant to cover all possible problems and conditions that can occur. Use common sense and caution when installing, maintaining or operating this or any other appliance.

Always contact the Dacor® Customer Service Team about problems and conditions that you do not understand.

Safety Symbols in this Manual

DANGER

Immediate hazards that **WILL** result in severe personal injury or death.

WARNING

Hazards or unsafe practices that **COULD** result in severe personal injury or death.

CAUTION

Hazards or unsafe practices that **COULD** result in minor personal injury or property damage.

WARNING

WARNING – NEVER use this appliance as a space heater to heat or warm the room. Doing so may result in carbon monoxide poisoning and overheating of the appliance.

WARNING

WARNING – NEVER cover any slots, holes or passages in the oven bottom or cover an entire rack with materials such as aluminum foil. Doing so blocks air flow through the oven and may cause carbon monoxide poisoning. Aluminum foil linings may also trap heat, causing a fire hazard.

DANGER

IMPORTANT: If you smell gas:

- Do not use or light any appliance.
- Do not touch any electrical switch or use any electrical devices, including the telephone, in your building.
- From a neighbors phone, immediately call the gas supplier. Follow the gas supplier's instructions.
- If you cannot contact the gas supplier, call the fire department.

IMPORTANT: Do not store or use combustible, flammable or explosive vapors and liquids (such as gasoline) inside or in the vicinity of this or any other appliance. Also keep items that could explode, such as aerosol cans, away from the burners and the oven. Do not store flammable or explosive materials in adjacent cabinets or areas.

IMPORTANT: Child entrapment and suffocation are not problems of the past. Junked or abandoned appliances are still dangerous, even if they sit out for "just a few days." When taking an appliance out of service, please follow the instructions below to help prevent accidents:

- Take off the door.
- Leave the racks in place so children cannot easily climb inside.
- Cut the prongs off the power cable plug and discard them.
- Cut the power cable off and discard it separately from the old appliance.

CALIFORNIA PROPOSITION 65 WARNING

The burning of gas cooking fuel generates some by-products that are on the list of substances which are known by the State of California to cause cancer or reproductive harm. California law requires businesses to warn customers of potential exposure to such substances. To minimize exposure to these substances, always operate this unit according to the use and care manual, ensuring you provide good ventilation when cooking with gas.

Important Safety Instructions

To reduce the risk of fire, explosion, electric shock, serious injury or death when installing or using this appliance, follow basic safety precautions, including the following:

WARNING

1. Read the accompanying use and care manual before operating this appliance.
2. Keep packaging materials away from children. Plastic sheets and bags can cause suffocation.
3. If you receive a damaged product, immediately contact your dealer or builder. Do not install or use a damaged appliance.
4. This range must be properly installed and grounded by a qualified installer according to these installation instructions prior to use. The installer should show the customer the location of the gas shut off valve and the fuse or junction box so that they know where and how to turn off the gas supply and electric power to the range.
5. Do not operate the range without the backguard or raised vent in place if the back wall is made of combustible materials. A fire may result.
6. Do not install, repair or replace any part of the range unless specifically recommended in the literature accompanying it. A qualified service technician should perform all other service.
7. Do not connect this range to the gas supply without the supplied gas pressure regulator installed.
8. Before performing any type of service or installation, make sure that the gas supply and electric power to the range are off.
9. NEVER block or cover any slots, holes or passages anywhere inside the oven or on the outside of the range or cover an oven rack with materials such as aluminum foil. Doing so blocks airflow through the oven and cooktop and may cause carbon monoxide poisoning or fire. See the **Getting to Know Your Range** section of the use and care manual for the location of the various air holes (slots).
10. Only use the range for cooking tasks expected of a home appliance as outlined in the literature accompanying it. This range is not intended for commercial use.
11. DO NOT TOUCH THE SURFACES OF THE OVEN OR COOKTOP DURING OR IMMEDIATELY AFTER USE.
12. Do not climb on any part of the appliance.
13. Do not leave children alone or unattended in the area around the range. Do not allow children to play with the controls, pull on the handle, or touch other parts of the range.
14. Do not store items of interest to children on top of or above the range. Children could be burned or injured while climbing on the appliance.
15. Do not attempt to use this appliance in the event of a power failure.
16. Do not tamper with the controls. Do not adjust or alter any part of the range unless specifically instructed to do so in these instructions.
17. To prevent the unit from tipping forward and to provide a stable installation, the unit must be secured in place with the anti-tip device as specified in these instructions.
18. Clean the cooktop thoroughly before operating it for the first time.
19. Keep flammable items, such as paper, cardboard, plastic and cloth away from the burners and other hot surfaces. Do not place such items in the oven. Do not allow pot holders to touch hot surfaces or gas burners.
20. Do not wear loose or hanging apparel while using the range. Do not allow clothing to come into contact with the interior of the oven or the cooktop and surrounding areas during and immediately after use.
21. To avoid a fire hazard, do not hang flammable or heat sensitive objects over the range.
22. If the range is near a window, do not use long curtains as window treatment. The curtains could blow over the cooktop and create a fire hazard.
23. Do not use the oven for storage.
24. Do not touch the burner assembly, grates or surrounding surfaces (including the backguard) or the interior surfaces of the oven during use. After use, make sure these surfaces have had sufficient time to cool before touching them.
25. Do not touch the outside surfaces of the range during the self-clean cycle. They will be hot. Venting from the oven may cause the cooktop and backguard to become hot.
26. Make sure that all the cooktop parts are dry before lighting a burner.

Important Safety Instructions

WARNING

27. Turn the knobs to the "OFF" position prior to removing them from the valve stems.
28. The cooktop should never be operated without the knobs and trim rings in place.
29. For your safety, do not use the oven to cook without the convection filter(s) installed. When the filter is not installed, the spinning fan blades at the back of the oven are exposed.
30. Non-stick coatings, when heated, can be harmful to birds. Remove birds to a separate, well-ventilated room during cooking.

CAUTION

1. To prevent damage, remove the meat probe from the oven when it is not being used.
2. Do not line the oven with aluminum foil or other materials. These items can melt or burn up during self-cleaning and cause permanent damage to the oven.
3. Do not leave metal objects, such as aluminum foil, the meat probe, cookie sheets, etc. on the bottom of the oven. Objects left on the bottom of the oven could damage the bake element. In addition, the objects themselves could be damaged.
4. The bake and broil elements are behind glass panels on the floor and ceiling of the oven chamber. Do not cover these glass panels with cookie sheets, aluminum foil, pots, pans, etc. Covering them could cause the heating elements to over-heat, damaging the oven.
5. Do not expose the knobs or trim rings to direct flame, hot utensils or other sources of heat.
6. Always ensure that the light fixture lens covers are in place when using the oven. The lens covers protect the light bulbs from breakage caused by high oven temperatures or mechanical shock.

Customer Service Information

If the unit requires service or you have questions or problems with installation, contact your Dacor dealer or the Dacor Customer Service Team.

Dacor Customer Service Team
1-800-793-0093 (U.S.A. and Canada)
Monday — Friday 6:00 A.M. to 5:00 P.M. Pacific Time
E-mail: customerservice@Dacor.com
Web site: www.Dacor.com

Be sure to have the model and serial number available when you call. The serial number and rating labels can be seen through the grill below the control panel, on the right side.

Model and Serial Number Location

Model Identification

ER30DSR-C-SCH/NG/H

SIZE (in inches) ————

TRIM TYPE ————

SR = Self-Rimming Option
No Character = Free Standing

COUNTRY CODE* ————

C = Equipped for use in Canada
No Character = Equipped for use in U.S.A.

GAS TYPE ————

NG = Natural Gas
LP = Liquid Petroleum (Propane)

ALTITUDE ————

H = Equipped for high altitude operation, 4000 ft. (1219 m) and up
No character = Equipped for low altitude operation

* Applies only to free standing models. All units with self-rimming option are equipped for use in the U.S.A. and Canada.

Planning the Installation

WARNING

IMPORTANT: Observe all governing codes and ordinances during planning and installation. Contact your local building department for further information.

Electrical Requirements

IMPORTANT: The information below applies only to free standing units equipped for use in the U.S.A. and units with the self rimming option.

It is the owner's responsibility to ensure that the electrical connection of this appliance is performed by a licensed electrician. The electrical installation, including minimum supply wire size and grounding, must be in accordance with the National Electric code ANSI/NFPA 70-1993* (or latest revision) and local codes and ordinances. A copy of this standard may be obtained from:

National Fire Protection Association
1 Batterymarch Park
Quincy, Massachusetts 02269-9101

- The correct voltage, frequency and amperage must be supplied to the appliance from a separate, grounded, circuit that is protected by a properly sized circuit breaker or time delay fuse. Refer to the ratings on the range rating label.

ER30D/ER30DSR ELECTRIC CIRCUIT REQUIREMENTS

Circuit Required	Total Connected Load
240 Vac, 60 Hz, 30 Amps	5.6 kW (23 Amps)

The ratings above are for reference only - refer to the range rating label (see page 3)

- Consult local building codes for the type and minimum wire gauge to use for the power requirements listed on the rating label.
- Suggested wiring color code: Black, white, red and green.
- The wiring needs to be long enough to allow the range to be pulled out from the wall for service, while remaining connected. See page 12 for further details.
- The wiring to the range must:
 - Have a minimum rating of 250 Volts @ 30 Amps
 - Include a strain relief
 - Be terminated by tinned leads, closed loop terminals or open ended spade lugs with upturned ends
- Where local code permits, a three (3) or four (4) wire appliance cord may be used. The appliance cord must:
 - Be UL listed type SRD or SRDT
 - Be equipped with a NEMA 14-50P 4 wire plug or, where local code permits, a NEMA 10-50P 3 wire plug.

NEMA 14-50P Plug

NEMA 10-50P Plug

- Prior to range installation, have a licensed electrician install a conduit junction box or electrical receptacle according to the type of wiring used.

Electrical Requirements - Freestanding Units for Use in Canada

- It is the owner's responsibility to ensure that the required 4 wire electrical outlet is installed by a licensed electrician as specified below prior to range installation. The electrical outlet installation, including minimum supply wire size and grounding, must be in accordance with all governing codes and ordinances.
- The correct voltage, frequency and amperage must be supplied to the appliance from a separate, grounded, circuit that is protected by a properly sized circuit breaker or time delay fuse. Refer to the ratings on the range rating label.

ER30D-C ELECTRIC CIRCUIT REQUIREMENTS

Circuit Required	Total Connected Load
240 Vac, 60 Hz, 30 Amps	5.6 kW (23 Amps)

The ratings above are for reference only - refer to the range rating label (see page 3)

- Freestanding ranges equipped for use in Canada come pre-wired with a 4 wire appliance cord and NEMA 14-50P plug.
- Do not modify the factory wiring. The plug is designed to plug directly into a NEMA 14-50R electrical receptacle installed by a licensed electrician according to the above specifications.

NEMA 14-50R Receptacle

Gas Supply Requirements

- Check your local building codes for the proper method of installation. In the absence of local codes, this appliance should be installed in accordance with the National Fuel Gas Code ANSI Z223.1.
- Be certain that the appliance being installed is correct for the gas service provided (natural gas or LP gas). Also, if operating the range at an altitude above 4000 ft. (1219 m) make sure it is equipped for high altitude operation. Refer to the range rating label and the table on page 3 to determine the correct model.
- See the table below for gas supply pressure requirements.
- The regulator inlet accommodates a 3/4" gas line. The range ships with a 1/2" to 3/4" adapter connected to the regulator.

GAS SUPPLY PRESSURE REQUIREMENTS

Gas Type	Manifold Pressure	Minimum Gas Supply Pressure
Natural Gas	5" Water Column	6" Water Column
Propane (LP)	10" Water Column	11" Water Column

The ratings above are for reference only - refer to the range rating label (see page 3)

Planning the Installation

**Model ER30DSR
with Standard Trim**

**Model ER30DSR
with Optional ERV Trim Kit Installed**

Planning the Installation

Cabinet Layout

- Carefully check the location where the range is to be installed. For best performance, the range should be placed away from drafts that may be caused by doors, windows and heating and air conditioning outlets.
- To reduce the risk of personal injury and to reduce accumulated smoke in the room, Dacor strongly recommends installing a range hood. A range hood should project horizontally a minimum of five (5) inches beyond the face of the cabinets.
- The range may be installed flush to the rear wall. Dacor recommends installing a non-combustible material on the rear wall above the range and up to the vent hood. If a non-combustible surface is not installed, a backguard or ERV raised vent must be installed. It is not necessary to install non-combustible materials behind the range below the countertop height.
- Any openings in the wall behind the appliance or in the floor underneath it must be sealed.
- The minimum distance from the sides of the range above the countertop to combustible side walls must be at least 10 inches.

WARNING

Do not operate the range without the backguard or raised vent in place if the back wall is made of combustible materials. A fire may result.

- All dimensions shown are based on standard American cabinets, 36 inches (914 mm) high at the finished countertop by 24 inches (610 mm) deep, with a 25 inch (635 mm) overall countertop depth. When installing the range into non-standard cabinets, minimum clearances shown in the diagrams must be maintained.

Gas and Electrical Service

- The shaded area shown denotes the location of the gas inlet and the electrical junction box/receptacle. This is the recommended location. For replacement purposes, the location of the existing utilities may be utilized provided they do not interfere with the sides or rear of the range. Check local building codes for permissible gas valve locations.
- An external manual shut-off valve must be installed between the gas inlet and the range for the purpose of turning on or shutting off gas to the appliance.

The installation must allow for the following:

- Access to the gas shut-off valve when the unit is installed.
- Access to the remote circuit breaker panel or fuse box, when the range is in place.
- The gas supply piping, gas shut-off valve and the electrical junction box or receptacle must be located so they do not interfere with the range when it is installed.
- The junction box and gas shut off valve must be located so that the range can be pulled out for service while the appliance remains connected.

Cutout DIMENSIONS	
F	G
36" (914 mm)* 30" (762 mm)**	30 1/16" (916 mm)*
* Recommended ** Minimum	

All tolerances: +1/16", -0 (+1.6 mm, -0)

Cabinet Cutout Dimensions

Planning the Installation

**Cabinet Cutout Dimensions
Self Rimming Installation**

**Cabinet Cutout Dimensions
Self Rimming Installation
with ERV Raised Vent**

Notes on Self-Rimming Installations:

- The above specifications assume a standard 24 inch cabinet depth and 25 inch countertop depth.
- When sliding the range into position, the range stops when the rear of the control panel hits the 1" notch in the countertop, leaving a 7/16" gap between the rear trim and the wall behind.

NOTE: If installing in a deeper countertop or installing a custom backguard, you may install the available 3" side panel kit to allow for custom countertop notches of 1 to 4 inches.

Notes on Self-Rimming Installations with ERV:

- The top and rear trim for the ERV trim kit are 1/2" deeper than the trim for installations without an ERV to allow the range to clear the ERV.
- When sliding the range into position, the range stops when the rear of the control panel hits the 1" notches in the front of the countertop.

Installation Instructions

Preparing for Installation

WARNING

- If the gas or electric service provided does not meet the product specifications, do not proceed with the installation. Call the dealer, the gas supplier or a licensed electrician.
- Before installing the range, you must locate and secure the anti-tip bracket to the floor.
- Be sure that the unit is not connected to gas or power before proceeding with the following sections.

IMPORTANT: Within the Commonwealth of Massachusetts, this appliance must be installed by a licensed plumber or gas fitter.

NOTE: When installing a backguard, always install it before sliding the range into place. See page 9.

Unpack the Range

Unpack the range and verify that all required parts have been provided. If any item is missing or damaged, please contact your dealer immediately. Do not install a damaged or incomplete appliance. The customer must report cosmetic issues within 30 days of installation.

Parts List

- | | |
|------------------------------|-----------------------------|
| • 2 Grates | • 4 Knobs |
| • 1 Small Stack Burner Cap | • Anti-tip Bracket w/Screws |
| • 1 Small Stack Burner Ring | • Meat Probe |
| • 2 Large Stack Burner Caps | • Griddle |
| • 2 Large Stack Burner Rings | • Wok Ring |
| • 1 Crown Burner Cap | • Stainless Steel Cleaner |
| • 1 Crown Burner Ring | • Lens Pry Stick |
| • 1 Crown Burner Head | • Literature Kit |
| • 1 GlideRack™ Oven Rack | • Ignitor Cleaning Brush |
| • 2 Standard Size Racks | • Broiler Pan/Grill |

See the use and care manual for a list of optional parts and accessories.

NOTE: The range also includes a thread ring removal tool (Part # 101539) for the crown burner. It is tie wrapped in place behind the right side of the kick panel when the range is shipped from the factory. Leave it in place unless the spill tray needs to be removed for service. Return it after use so that it is available if needed in the future.

**Thread Ring Removal
Tool Location**

Installation Instructions

Level and Adjust the Range Height

1. Raise or lower the range until it is the same height as the counter-top. To adjust the height, turn the foot on the bottom of each leg as shown below.
2. Use a level to make sure that the range does not tilt front to back or side to side. Readjust the legs if necessary.

* Distance to floor: 2 7/16" to 4 9/16"

Install the Anti-Tip Bracket and Foot

1. Locate the anti-tip foot and lower it until it is 1/16" (2 mm) off the floor. See the bottom left diagram.

2. Locate the anti-tip bracket included in the parts box.
3. Install the anti-tip bracket on the floor using the four (4) included screws. See the diagram below for location.

ANTI-TIP BRACKET PLACEMENT	
H	6 5/8" (168 mm)
J	6 3/8" (162 mm)

Changing the Backguard (Models ER30D and ER30D-C)

Models ER30D and ER30D-C come standard with a 3" backguard installed. The 6" and 9" backguards are optional.

To change the backguard:

1. Remove and retain the three (3) chrome screws on the front of the existing backguard.
2. Loosen the upper screws on the back of the side panels.
3. Slide the existing backguard off the unit.

4. Place the new backguard over the back of the range.
5. Fasten the backguard using the existing screws.
6. Tighten the upper screws on the back of the side panels.

Backguard Installation

Installation Instructions

Installing the ERV Trim Kit (Model ER30DSR)

To install a raised vent with self-rimming model ER30DSR, you must install the optional ERV trim kit.

To change the trim on model ER30DSR:

1. Remove and retain the seven (7) chrome screws that hold the existing trim pieces in place.
2. Slide the existing trim pieces off the range.

Trim Removal and Installation

3. Slide the new trim pieces onto the range.
4. Fasten the new trim pieces in place using the existing screws.

Installing the 3 Inch Side Panel Kit (Model ER30DSR)

For self-rimming installations with non-standard countertop depths, installation of the optional side panel kit may be necessary to cover the sides of the range that protrude from the cabinet.

To install the side panel kit:

1. Open the oven door. Remove and retain the two (2) screws on the top of the kick panel. The screws are accessed through the space between the door and the oven opening.

2. Close the door. Remove and retain the two screws from the back of the kick panel as shown below. Pull the kick panel free from the front of the unit.

3. Remove the left end cap retaining screw from under the rim of the control panel and remove the end cap.

4. Hold the left side panel in position on the side of the range.

Remove Center Screw on Left Side

Installation Instructions

3 Inch Side Panel Kit Installation for Model ER30DSR (continued)

Locate the center mounting hole. Remove and retain the screw attached to the chassis beneath it.

5. Insert the tabs on the trim piece into the slots on the range.
6. Use the hex head screw (83023) removed from the side, a Torx head screw removed from the kick panel and the hex screws from the kit to attach the side panel to the range. Three (3) hex head screws attach the side. One (1) Torx head screw (83709) inserts through the end cap hole to attach the top of the side panel. One (1) Torx head screw (83709) inserts through a hole in the front panel to attach the bottom of the side panel.

3 Inch Side Panel Installation

7. Reinstall the end cap.

8. Repeat steps 3 to 7 for the right side panel. **NOTE:** There is an additional hex screw (83023) in the kit for the right side panel because the center mounting screw is not reused as with the left side (do not perform step 4).

9. With the door closed, reattach the kick panel to the range by snapping the ball studs on the back of the panel into the holes on the front panel of the range.

10. Open the door and reattach the kick panel top screws removed in step 1.

Installation Instructions

Removing the Oven Door

WARNING

- Do not attempt to disengage the hinge catches with the door removed from the oven. The hinge springs could release causing personal injury.
- Do not lift or carry the oven door by the door handle.

To make the range easier to move, remove the door(s) to reduce weight.

1. Open the door to its fully opened position.
2. Rotate the catch over the retaining arm on each hinge.

Releasing the Door Hinges

3. Lift the oven door to about a 15° angle from the vertical position.
4. Hold the door with both hands just below the handle and pull it away from the oven while continuing to lift.

Door Gripping Points

Electrical Connection

WARNING

- Wire the range only in compliance with local ordinances.
- Do not turn on power to the range until instructed to do so in the **Verify Proper Operation** section of these instructions.
- Improper connection of the electrical wiring can cause an electric shock hazard and damage the appliance. Dacor is not responsible for damages resulting from improper installation.
- The ground terminal (or lead) on the appliance must be connected to a grounded, metallic, permanent wiring system or grounding conductor.
- Do not use an extension cord with this appliance. Such use may result in fire, electric shock or other personal injury.
- Do not install a fuse in the neutral or ground circuit. A fuse in the neutral or ground circuit may result in an electric shock hazard.

NOTE:

Freestanding model ER30D-C is wired for use in Canada and comes from the factory pre-wired. If installing a pre-wired range, skip to **Gas Supply Connection** on page 17.

IMPORTANT:

- Make sure that the conduit or appliance cord is long enough to allow the range to be pulled out for service without disconnecting it from power.
- Do not disconnect any of the wires inside the range electrical box unless instructed to do so.

Installation Instructions

Connecting the Wiring to the Range

Refer to the range rating label (see page 3) for power requirements.

There are four possible ways to wire the range:

- 4 Wire Conduit
- 3 Wire Conduit (where local codes permit)
- 4 Wire Appliance Cord (where local codes permit)
- 3 Wire Appliance Cord (where local codes permit)

The sections below and on the following pages give directions for connecting each type of wiring harness.

WARNING

Do not connect the green appliance wire to the neutral (white) supply wire unless local building codes permit.

Connecting Conduit to the Range

NOTE: See pages 16 and 17 for instructions to connect an appliance cord to the range.

1. Remove the range electrical access cover from the back of the range.

2. If using a 4 wire connection, loosen the grounding screw and remove the neutral to ground jumper link.
3. Remove the nut from the conduit strain relief (not included).
4. Slide the wires and the end of the strain relief into the hole on the bottom of the range electrical box.
5. Before connecting the wires, slide the strain relief nut over the wires and thread it onto the conduit strain relief inside the box. Tighten into place.
6. Connect the white wire to the neutral terminal in the box.
7. Connect the black wire to the L1 power supply terminal.
8. Connect the red wire to the L2 power supply terminal.
9. If using a 4 wire connection, connect the green wire to the grounding screw inside the box.
10. Replace the range electrical access cover.

3 Wire Conduit Connection - Where Local Code Permits

4 Wire Conduit Connection

Installation Instructions

Electrical Connection (cont.)

Connecting the Conduit to the House Electrical Junction Box

WARNING

- Do not ground the appliance to a gas supply pipe or hot water pipe.
- Do not turn on power to the appliance until the range is permanently grounded.
- A grounded cold water pipe must have metal continuity to electrical ground and must not be interrupted by insulating materials. Any insulating materials must be jumpered with a length of No. 4 copper wire securely clamped to bare metal at both ends.

NOTES:

- The power supply must be properly polarized. Reverse polarity will result in continuous sparking of the electrodes, even after flame ignition.
 - If there is any doubt as to whether the power supply is properly polarized or grounded, have it checked by a licensed electrician.
1. With the range positioned directly in front of the cabinet cutout, feed the appliance wires into the junction box. Depending upon local codes, utilize one of the three (3) methods shown to connect the appliance to the junction box.
 2. Connect the white wire from the appliance to the neutral (white) supply wire in the junction box.
 3. Connect the black wire from the appliance to the black (L1) power supply wire in the junction box.
 4. Connect the red wire from the appliance to the red (L2) power supply wire in the junction box.
 5. If using a 4 wire connection, connect the green wire to a grounded supply wire in the junction box or to a grounded cold water pipe. If connecting to a grounded cold water pipe:
 - ◇ Use a separate copper grounding wire (No. 10 minimum) to connect to the cold water pipe by means of a clamp and an external grounding connector screw.
 - ◇ If there are any materials that isolate the cold water pipe from ground, jumper it with a No. 4 copper wire, clamped on both ends.
 6. Replace the junction box cover.

Insulated Pipe Jumper

Installation Instructions

Electrical Connection (cont.)

Appliance Wire Connections - Where Local Code Permits

WARNING

Do not connect the green appliance wire to the neutral (white) supply wire unless local building codes permit.

1. Remove the range electrical access cover from the back of the range.
2. If using a 4 wire connection, loosen the grounding screw and remove the neutral to ground jumper link.
3. Remove the conduit bracket from the bottom of the range electrical box.

4. Disassemble and remove the strain relief from the appliance cord (not included). Insert the tabs on the two parts of the strain relief into the hole on the bottom of the box and reassemble it so that the tabs are below the box and the strain relief itself is inside the box.

5. Slide the end of the appliance cord into the strain relief from the bottom of the box
6. Connect the white (neutral) wire to the neutral terminal in the box.
7. Connect the L1 wire to the L1 power supply terminal in the box.
8. Connect the L2 wire to the L2 power supply terminal in the box.
9. If using a 4 wire connection, connect the ground wire to the grounding screw inside the box.
10. Tighten the strain relief so that the appliance cord is held snugly in place.
11. Replace the range electrical access cover.

3 Wire Appliance Cord Connection - Where Local Code Permits

Installation Instructions

Gas Supply Connection

WARNING

- Make sure the gas supply valve is off and that the power to the range is turned off at the circuit breaker or fuse box prior to connecting the gas line.
- Do not apply excessive pressure when tightening gas connections and fittings.
- Do not use Teflon tape or plumber's putty on gas flex line connections.
- Check for gas leaks as instructed below before using the appliance. Do not use a flame to check for leaks.
- For LP installations, the LP gas tank must have its own high pressure regulator. This is in addition to the pressure regulator provided with the range.
- The maximum gas supply pressure to the regulator must never exceed 1/2 pound per square inch (psi) or 3.5kPa. The range and shut-off valve must be disconnected from the gas supply piping during any pressure testing exceeding 1/2 psi (3.5 kPa).
- The range must be isolated from the gas supply piping by closing the shut-off valve during any pressure testing at or below 1/2 psi (3.5 kPa).
- Be careful not to damage the wires inside the chassis while pushing the gas line through the access holes.

NOTE: The gas pressure regulator is pre-set at the factory for the type of gas intended for use with the appliance. To verify that the appliance is compatible with the type of gas available, check the range rating label (see page 3 for location.) Ranges intended for use with LP gas will have "LP" as a part of the model number. Consult your dealer if the range is not compatible with the type of gas supplied.

1. Make sure the gas supply valve is in the off position and power to the range is off.
2. Connect a flexible gas supply line to the gas shut-off valve previously installed on the stub out. The gas line needs to be long enough to allow the range to be pulled out for service.
3. Slide the gas line up through the access holes in the chassis and up to the regulator. Move the wires around inside the access holes to prevent them from catching on the gas line as you push it up.
4. Connect the gas line to the regulator.
5. Turn all cooktop control valves to the "OFF" position.

OFF Icon

6. Turn on the gas supply and check all lines and connections for leaks using a soap and water solution.
7. Turn the gas shut-off valve to the "OFF" position.

4 Wire Appliance Cord Connection

14-50P Plug

Installation Instructions

Final Installation

1. Peel the protective plastic coating off of the range, including the range door.
2. Adjust the range legs to the desired height.
3. Carefully slide the range into position in the cutout. The rear anti-tip leg should engage the anti-tip bracket.

Re-installing the Oven Door(s)

WARNING

To avoid personal injury or damage to the door from it falling off its hinges:

- Make sure that the notch on the bottom of each hinge rests on top of the lower lip of each hinge receptacle before attempting to open the oven door.
 - Rotate the hinge locks toward the front of the range immediately after installation of the door.
1. Grasp the oven door on opposite sides and hold it at a 15° angle from the front of the oven. Slide the hinges into the hinge openings, resting the bottom of the hinge arms on the hinge receptacles. Continue to hold the door at a 15° angle with one hand while pushing in on each of the bottom corners of the door. Push until the notch on the bottom of each hinge slips over the lower lip of each hinge receptacle.
 2. Lower the door to the fully opened position.
 3. Rotate the two hinge locks toward the oven.
 4. Slowly and carefully open and close the door completely to ensure that it is properly installed.
 5. Remove any packaging from inside the oven(s).

Door Installation

Installing the Burner Knobs

CAUTION

Installing the range knobs in the wrong position may result in damage to the griddle included with the range. The knobs for the right burners are marked with the maximum griddle settings.

There are two (2) different types of knobs supplied with the range. The knobs for the right burners have the words "MAX GRIDDLE" on them.

NOTE: When installing the knobs, align the "D-shaped" opening on the back of the knob with the end of the valve shaft. Carefully push the knob on until it stops.

- Put the knobs with the words "MAX GRIDDLE" on them onto the right valve shafts.
- Put the remaining knobs on the left valve shafts

Installation Instructions

Installing the Burner Components

WARNING

Never attempt to operate the cooktop section of the range with any of the burner rings, burner caps or grates removed.

- Remove the burner rings, burner caps and grates from their shipping packages.
- Install the burners as shown.
- Gently set the grates on top of the spill tray. Put the legs of each grate inside the corresponding dimples.

STEP 3: Install burner cap. Ridge on cap must surround top of ring.

STEP 2: Install burner ring. Line up ring tabs with head slots. Twist back and forth to assure proper seating.

STEP 1: Install burner head. Put locating tab in keyed hole.

Crown Burner Installation

STEP 3: Install burner caps. Ridge on cap must surround top of ring.

STEP 2: Turn ring until it drops into place. Twist back and forth to assure proper seating.

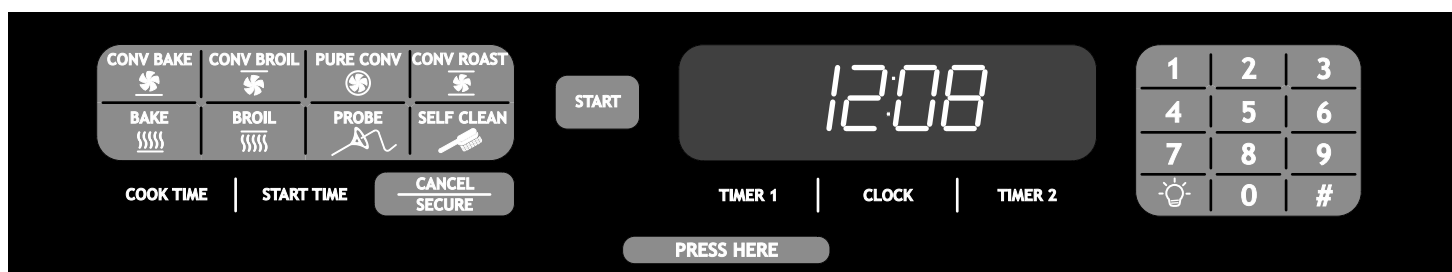

STEP 1: Put burner ring on top of head.

Stack Burner Installation

Installation Instructions

Verifying Proper Operation

Prior to operating the cooktop or oven, please read the accompanying use and care manual completely. It contains important safety, service and warranty information.

- Before beginning the test procedure, ensure that all cooktop control valves are in the **"OFF"** position, and all burner rings, burner caps, and grates are properly positioned on the cooktop frame. Turn on the gas supply at the shut-off valve.
- Plug in the appliance cord, if applicable. Turn on power to the range at the circuit breaker or fuse box.
- Set the time of day:
 - Press the clock key.
 - Enter the time on the number keypad (within 6 seconds).
 - Press **START**.
- Press the **BAKE** key.
- Enter the temperature of **350°F** on the keypad.
- Press **START**.
- The display should show **BAKE**, and the preheating temperature.
- Press the **CANCEL-SECURE** key to stop the oven heating process.
- Test each cooktop burner separately by pushing in and turning one control knob at a time counterclockwise to the **"HIGH"** position. It may take up to four seconds for ignition to occur, at which time the ignitor will stop sparking. If ignition does not occur within four seconds, turn off the knob, wait for at least five minutes to allow any gas to dissipate, then repeat the ignition test. After ignition, rotate the control knob counterclockwise from **"HIGH"** to **"LOW"** to adjust the flame height progressively.
- Turn the control knob to the **"OFF"** position.
- Repeat the ignition test for all burners. When installed properly, the flame will be steady and quiet. It will also have a sharp, blue inner cone that will vary in length proportional to the burner size. If the range is equipped for use with LP gas, the ends of the flame may be yellow at the tips, which is normal.

OFF Icon

NOTES: If either the oven or cooktop does not operate properly, follow these troubleshooting steps:

- Verify that power and gas are supplied to the range.
- Check the electrical connections and gas supply to ensure that the installation has been completed correctly.
- Repeat the above bake test or burner ignition test.
- If the appliance still does not work, contact the Dacor Customer Service Team at (800) 793-0093.

Do not attempt to repair the appliance yourself. Dacor is not responsible for service required to correct a faulty installation.

Installation Checklist

WARNING

- To ensure a safe and proper installation, the following checklist should be completed by the installer to ensure that no part of the installation has been overlooked.
- Proper installation is the responsibility of the homeowner. The importance of proper installation of your Dacor range cannot be overemphasized.

- ☐ Has the plastic coating been peeled off of the outside of the range? Have all packaging materials been removed from inside the oven?
- ☐ Are all leveling legs extended down to make contact with the floor? Is the unit level? See Page 9.
- ☐ Is the range secured in place with the provided anti-tip bracket and foot according to these instructions? See Page 9.
- ☐ If the wall in back of the cooktop is combustible, is a backguard or raised vent installed?
- ☐ Is the range wired and grounded according to these instructions and in accordance with all applicable electrical codes? Has the electrical access cover been replaced? See Pages 3 and 12 to 17.
- ☐ Has the gas supply inlet pressure been measured to ensure that it does not exceed the maximums stated in these instructions? See page 4.
- ☐ Is the range connected to the gas supply according to these instructions and in accordance with all applicable codes? See page 17.
- ☐ Did the installer check the gas supply for leaks?
- ☐ Is the oven door properly installed according to these instructions? See page 18.
- ☐ Have the burner knobs been installed in the proper positions? See page 18.
- ☐ Are the burners and grates properly installed according to these instructions? See page 19.
- ☐ Has proper operation been verified?
- ☐ Have any problems been noted on the warranty card or during the on-line activation? Has the warranty been activated on-line or the warranty card been filled out completely and mailed?
